Camera Traps in Animal Ecology: Methods and Analyses From Springer

Remote photography and infrared sensors are widely used in the sampling of wildlife populations worldwide, especially for cryptic or elusive species. Guiding the practitioner through the entire process of using camera traps, this book is the first to compile state-of-the-art sampling techniques for the purpose of conducting high-quality science or effective management. Chapters on the evaluation of equipment, field sampling designs, and data analysis methods provide a coherent framework for making inferences about the abundance, species richness, and occupancy of sampled animals. The volume introduces new models that will revolutionize use of camera data to estimate population density, such as the newly developed spatial capture–recapture models. It also includes richly detailed case studies of camera trap work on some of the world’s most charismatic, elusive, and endangered wildlife species. Indispensable to wildlife conservationists, ecologists, biologists, and conservation agencies around the world, the text provides a thorough review of the subject as well as a forecast for the use of remote photography in natural resource conservation over the next few decades.

Editorial Review

Review

Aus den Rezensionen:

“... In diesem neuen englischsprachigen Buch über Kamerafallen wird der derzeitige Stand des Wissens von insgesamt 22 Experten zusammengefasst. ... der Aufbau des Buchs ist gut nachvollziehbar und logisch ... Es bleibt niemals an der Oberfläche, sondern geht wissenschaftlich so weit wie möglich ins Detail und ist daher eine echte Hilfe für Anwender gleicher oder ähnlicher Methoden. ...“

About the Author

Allan O'Connell is a research wildlife biologist with the U.S. Geological Survey's Patuxent Wildlife Research Center in Maryland. His research concentrates on wildlife management issues for U.S. federal resource agencies. His cutting-edge work includes the design of multiple technique sampling and monitoring programs to assess biodiversity, the use of camera traps to estimate population parameters, and the investigation of effects of predators on isolated populations of endangered species.

James Nichols is a senior scientist with the Patuxent Wildlife Research Center. He is an expert on capture–recapture sampling methods, population modeling, and adaptive management. He has authored or co-authored more than 350 scientific publications, including two books, four edited volumes, and nine monographs, on various aspects of wildlife population ecology. He is a recipient of the 2007 U.S. Presidential Rank Award for Meritorious Service and has received national recognition for his work from various universities, the U.S. Fish and Wildlife Service, U.S. Geological Survey, The Wildlife Society, American Statistical Association, and the U.S. Forest Service.

Ullas Karanth is an internationally known conservation scientist (see www.wikipedia.org). Based in India, he is a senior conservation scientist for the Wildlife Conservation Society, where his long-term research has focused on the ecology and conservation of tigers and their prey. He has more than 70 scientific publications to his credit. His work has been featured in the world's media including the New York Times, Time magazine, National Geographic, BBC, CNN, Discovery, and others. He is the recipient of the Sierra Club's prestigious international EarthCare Award and the World Wildlife Fund's J. Paul Getty Award for Conservation Leadership.

Users Review

From reader reviews:

Kathy Wilson:

What do you think about book? It is just for students since they are still students or the idea for all people in the world, the actual best subject for that? Merely you can be answered for that problem above. Every person has various personality and hobby for each and every other. Don't to be pushed someone or something that they don't would like do that. You must know how great and also important the book Camera Traps in Animal Ecology: Methods and Analyses. All type of book are you able to see on many sources. You can look for the internet methods or other social media.

Bertha Underwood:

Spent a free time and energy to be fun activity to try and do! A lot of people spent their down time with their family, or their friends. Usually they performing activity like watching television, going to beach, or picnic in the park. They actually doing ditto every week. Do you feel it? Do you need to something different to fill your free time/ holiday? Could be reading a book is usually option to fill your free time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to test look for book, may be the book untitled Camera Traps in Animal Ecology: Methods and Analyses can be fine book to read. May be it might be best activity to you.

Sang O\Connor:

A lot of book has printed but it takes a different approach. You can get it by web on social media. You can choose the top book for you, science, comic, novel, or whatever simply by searching from it. It is known as of book Camera Traps in Animal Ecology: Methods and Analyses. You can include your knowledge by it. Without making the printed book, it may add your knowledge and make you actually happier to read. It is most significant that, you must aware about guide. It can bring you from one destination for a other place.

Aletha Bassett:

Book is one of source of understanding. We can add our expertise from it. Not only for students but additionally native or citizen require book to know the update information of year to year. As we know those textbooks have many advantages. Beside all of us add our knowledge, could also bring us to around the world. By the book Camera Traps in Animal Ecology: Methods and Analyses we can acquire more advantage. Don't you to definitely be creative people? For being creative person must want to read a book. Just simply choose the best book that ideal with your aim. Don't end up being doubt to change your life at this book Camera Traps in Animal Ecology: Methods and Analyses. You can more desirable than now.
